

**DID YOU KNOW
THAT YOU COULD INSTALL
YOUR OWN SPA IN 2 EASY STEPS?**

- 1. Grab the plug.**
- 2. Place into any ordinary outlet.**

It's that easy! That's great if you're a homeowner who really wants to save on the installation and wiring costs of permanent tubs. And a plug & play hot tub is travel sized! You can take it/set it up anywhere!

BENEFITS OF OWNING A PLUG AND PLAY SPA

1. IF YOU'RE RENTING, you can still enjoy a plug & play spa at home and take it with you to your next house. You don't have to get permission for an electrical upgrade or pay for it, the 110-volt plug in spa doesn't need one. You'll avoid the strict rental agreement rules to make no modifications to your housing and the cost of hiring an electrician.

2. BIG SAVINGS since you don't need any new electrical hook-ups. A surprising number of homes cannot support an additional electrical circuit for a standard hot tub without replacing the main breaker. This can cost hundreds of dollars. However, with a plug & play spa, you can use any existing 110V electrical outlet.

3. NO DIGGING REQUIRED. Here's another installation cost saver. A plug & play spa does not require buried cable. Most cities require that any 220V power be buried at least 18" deep.

For homeowners who want a small, affordable hot tub that can be installed and moved easily, plug & play spas made by the manufacturers of QCA Spas are the best choice, with easy care and high owner satisfaction.

PLUG & PLAY SPAS FROM QCA SPAS ARE...
